

# T1542 Line-connected Dispatcher Terminal

*Manage your voice and data mobile communications with the new Microsoft Windows™ based Line-connected Dispatcher Terminal (LDT).*

Your staff are out in the field. How do you get information to them? Where is the next assignment?

## **Streamlined Communications**

- *Wide Array of Voice and Data Call Types*
- *Dynamic Regrouping*
- *One Touch Dialling to most Numbers*
- *Dial by Name from Address Book*
- *Shared Address Book for Multiple Dispatchers*

Designed for use with a TaitNet trunked radio network, the LDT combines the functions of a trunked radio and a PC, enabling a dispatcher to efficiently manage a large number of mobile staff without using scarce RF resources.

The LDT uses voice, pre-defined status messages, or short data messages (SDM) to communicate effectively. With the LDT you can patch\* calls to other radios, PABX extensions or the public telephone network.

Lists of current calls, recent calls, received data and call requests are displayed by the LDT. All calls are logged to file. The caller and called party identifications are recorded with the date and time of the call.

The LDT provides an efficient and highly functional means of keeping in contact with mobile personnel. The LDT is suitable for transportation, government departments utilities, ports and oil refineries.

\* Only available on TaitNet T1541 based systems.

- **Easy-to-learn** graphical user interface featuring mouse and keyboard or keyboard-only operation.
- **Four call lists** optimise the display for the despatcher's main activities.
- **Icons and colour** make the information easy to interpret.
- **Recent calls list** displays up to 50 calls.
- **Daily log files** store call details for up to one month.
- **Group numbers** can be selected for monitoring.
- **Transparent access** to radios anywhere in the network.
- **Dynamic regrouping** of call groups. Radios can be added or deleted from work groups on the fly as work groups change.
- **Customised configuration** allows the despatcher to specify how the LDT handles incoming calls. The LDT can automatically answer them, queue them, place them in the callback list or put them on hold. The despatcher can specify a different response depending on the priority level, type of call, and whether the LDT has a current call.
- **Audio interface cards** use standard telephone handset wiring enabling a wide range of operator's instruments to be used.

Tait is your complete supplier of radio communications equipment, with mobile, portable and infrastructure solutions. Our experience spans over 30 years, covering off-the-shelf and customised products, single-site systems and turnkey solutions.
